HOW DO YOU IMPROVE THE BANDIT?

Every year we ask ourselves this question, and each year there follows another question, what are we looking for? Our primary focus is to develop the wind range, the lateral pull of the kite, the feedback and feeling at the bar and the maneuverability. After eleven years of constant enrichment, we focused on specific areas to channel our efforts and achieve our goals with the twelfth edition of the BANDIT.

◉ RIDING RANGE

This has always been a key are for the BANDIT, a wider wind range means you can enjoy longer sessions in more varied conditions. Just because a kite works across a wide range though doesn't mean it is good. Enhancing the effective "Riding Range" was the goal for the designers and testers; this is the range of wind in which you can perform all your tricks. You'll find the BANDIT allows you to ride at your best regardless of the conditions.

◉ ULTIMATE LINK

There is a special link between the rider, wind and the water. Your connection to the kite is crucial, it is how you feel the power from the wind, and it provides the control as well. The feelings we get when we are kiting are always different, the wind is constantly changing and so too is the water we ride on. With predictable and consistent power delivery and incredible bar feedback, the new BANDIT ensures every session is a good session. There will be no more complaints about gusty winds or struggling for control when overpowered.

KEY POINTS

- The fantastic riding range of the new BANDIT means that you'll enjoy every session, no matter the wind variations
- The kite is an extension of your body that performs in harmony with you; this ultimate link means that as soon as you've thought about the turn, the kite is already making it with a perfect feeling and control.
- This year the BANDIT delivers extraordinary maneuverability and reactivity, it's like driving an "F-ONE car" instead of a bus.
- Power delivery is smooth and consistent regardless of the conditions offering you maximum comfort.
- The perfect fusion of all our knowledge, the latest materials and technology means you can enjoy a kite that excels in all disciplines and makes every session one to remember.

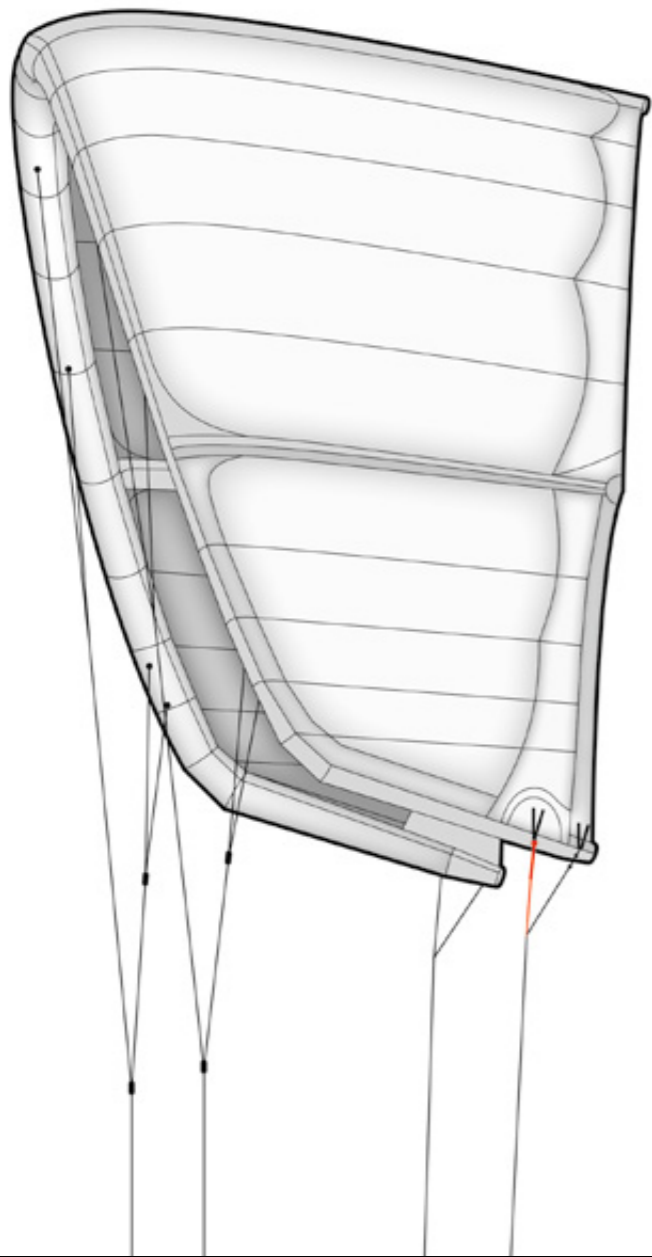

◉ MANEUVERABILITY

At F-ONE we believe that we're happier when we are riding smaller kites. 7-9 m² kites are always the most fun to fly, as they are so reactive. This year the handling on the new BANDIT has been further improved so that every kite feels smaller in the sky. You'll find the 12 m² flies like a 9 m² and that feeling is priceless.

◉ SMOOTH POWER DELIVERY

Many kites don't fully appreciate the importance of lateral pull in their kites. When we ride, we are always fighting the forces from the kite by edging the board to create forward motion. For many years we have been working to reduce the lateral pull felt by the rider, this means you can enjoy longer, more comfortable sessions with less effort. The new BANDIT offers the perfect balance between power and lateral pull, with fantastic low end and incredible comfort in the middle and at the top of the wind range. Edging has never been so easy, your jumps will be even bigger and your board is released.

◻ SHEETED IN

The back line is released and the forces go through the front connector. The bar pressure increases and the maneuverability is less direct. It offers a very progressive bar with a feeling of a sheeted out back connector while we sheet in, therefore the pressure increases progressively.

◻ SHEETED OUT

The kite tilts and the back line stiffens. The tensions move to the trailing edge which has several effects:
→ less flapping
→ better start
→ maneuverability with less pressure.

BANDIT 12

SUMMER EDITION

This year we decided to give you the opportunity to discover and sell our brand new BANDIT earlier. We will deliver 1.500 exclusive pieces during July & August in order to brighten your SUMMER!

- A limited edition of 1.500 numbered pieces
- For the passionate people who will discover the new BANDIT 12 before everybody else
- Truly unique and exclusive colours
- Only available while supplies last

Be part of the very select few to discover before everybody else the stunning new fee of the BANDIT 12 this summer!

FREESTYLE

A FIVE STRUT DESIGN

The C-Shape itself has always been the best option for making an easy to control and dynamic kite. To maximise the handling during intense moments such as loading up for pop and slack, and megaloops, we utilised a five strut design which keeps the profile exceedingly steady and gives our riders great confidence in the kite at all times. We decided to add a 5th line to help with control, optimise the power and also to enable them to relaunch the kite quickly with minimal effort.

- Freestyle kites undergo unique situations as the riders load and release, going from full power as they edge to no power as they fly through the air, that "slack" feeling is the Holy Grail of a good freestyle kite. The WTF!?. has superior pop and excellent slack, while we have ensured the kite is strong enough to handle these intense demands, especially during high wind kite loops, we have also kept the weight of the kite down to ensure excellent handling.
- Each size of the WTF!?. has been individually designed to match the conditions they are aimed at. The larger sizes have been developed to deliver more power and get you planing early; the smaller sizes are built with a high top end wind range in mind. This means whichever size you choose; you know everything has been done to get the most out of the given conditions on the day.

- We are offering the WTF!?. in every size from 5 to 15 m² allowing you to choose the perfect quiver for you without having to compromise. The kites are also highly tuneable, allowing you to dial in the flying characteristics to suit your riding style. There are three tuning options on the front lines; these allow you to adjust the kite to fly according to your level, riding style and the conditions of the day. Three rear line tuning options enable you to tune how the kite feels at the bar and adjust the handling too.
- The WTF!?. ships with our new LINX BAR adjustable from 42 to 35 cm letting you further tune the kite to your desired preference. This bar also comes with a wide chicken loop to make hooking in and out easy. Safety is, of course, important, even for the best riders; the 5th line takes care of this and can be activated even when the kite is in suicide mode by simply pushing the release.

KEY POINTS

- Pure C-Shape Freestyle design
- 5th line set up
- 5 strut design
- Excellent pop & ultimate control during kite loops
- REACTOR VALVE for faster inflation
- LINX BAR 5 lines

- At the top level of freestyle today judges are rewarding the riders who enter the trick at high speed, then pop to massive heights while being able to perform technical tricks with fast landings to get the maximum points. The WTF!?. is unique in that we let you tune the way the kite pops and gives your slack.
- By moving the front lines, you can get more or less power, pop and slack. As you start to reach competition level you can select the higher power option to ensure you get those amplitude points, if your level is still progressing then you can dial the kite down a few notches to make the pop easier and the slack more forgiving.
- We tested a lot of different profiles for each size to get the perfect combination of pop, slack and support. When working with our designer Robert Graham, the riders were amazed at how much he could tune each profile and prototype to create the perfect combination of these three critical aspects to make the best kite possible.
- When talking about the WTF!?., it's important to fully understand these three key design elements. Pop relates to the ability of the rider to unhook and dig the edge into the water. This allows them to load up the lines and the board for an explosive launch into their trick.
- Of course, once you are in the air you need the lines to de-tension, creating slack, this allows you to pass the bar with ease, and the rider can perform tricks without being

pulled by the kite. Lastly, support is an often-overlooked aspect, riders these days are going higher and further than ever before with the kite super low. They don't want to fall from the sky though, with no support from the kite, so it is critical that the kite can regain some tension and help them avoid overly harsh landings.

- By working tirelessly with our demanding pro riders and expert designer and testers, we have created a kite that combines these three essential characteristics in perfect harmony. In addition to that, the WTF!?. gives the rider great bar feedback, an impressive "size tuned" wind range, alongside excellent handling and turning capabilities.

FOIL / LIGHTWIND

THE MOST USER-FRIENDLY ONE STRUT KITE ON THE MARKET TODAY, INCREDIBLE LIGHT WIND ABILITY MATCHED WITH ABSOLUTE EASE OF USE.

KEY POINTS

- Ultra lightweight
- Unbeatable low wind performance
- Exceedingly stable, even when overpowered
- Total control with excellent bar feedback
- Great speed control on a foil
- Easy relaunch with reverse launch capabilities too

- ▶ The BREEZE V2 is for anyone who wants a light weight set up that offers incredible handling with great low-end performance. Now with a range of sizes going from 3 to 17 sq.m, it is the perfect kite for light wind freeriding and foiling in any conditions. Thanks to its stability and light weight, the BREEZE can show off interesting performance in light wind wave riding too.
- ▶ Our design and test team have worked tirelessly to bring significant improvements to the BREEZE V2. You'll discover the new kite has a more stable canopy when depowered and the overall range of the kite has been widened. Across the range of sizes, the handling has been finely tuned; the larger sizes are even more responsive, making them perfect for manoeuvres.

- ▶ The smaller sizes are optimised to handle stronger winds with total speed control and great stability while foiling. In the air, the BREEZE V2 is so intuitive to fly you can forget about the kite and concentrate on the riding. This unique characteristic makes it perfect for beginners and advanced riders alike.
- ▶ The kite has also been designed to work with a low front V on the bar to untangle lines after those inevitable kite crashes. The BREEZE V2 is available right now; if you want a lightweight, one-strut kite that can put a smile on your face in 8 knots, the decision is easy, let's get breezy!

PROG.

HIGH PERFORMANCE / HANG-TIME

PRESENTATION

Introduced in 2017, the FURTIVE is a “satellite” kite which comes as a complement to the BAN-DIT. Designed as a genuine performance kite and hangtime machine, the FURTIVE is available in many sizes from 5 m² to 19 m² to maximize your performances in all kinds of conditions.

In 2014, Alex CAIZERGUES asked us for some custom kites to beat his own speed record of 56.62 kts. The design brief was to reach a maximum speed by riding over-powered with a 6.5 m² on the speed run with an average wind of 50 kts... We have therefore worked on a kite with more aspect ratio and 5 struts.

But during the development, two things happened:

- ▶ First we were surprised by the enjoyment we had when riding with this kite. This is due to the thrills it provides thanks to its performance (who doesn't like speed and acceleration...?) but also thanks to its hang-time.
- ▶ Then the foil riders in search for a long distance weapon became interested in this kite and immediately wanted to use it.

PROGRAM

The FURTIVE is ideal for long-distance racing, speed riding and hang-time sessions.

DESIGN

The FURTIVE features a high aspect ratio for high performance and 5 struts to control the profile for the 6.4 to 10 m². The larger sizes from 12 to 19 m² come with only 3 struts in order to optimize the kite's weight. The 5 m² also comes with 3 struts due to its small size. Its profile has been developed to ensure maximum traction at the edge of the window. Its W5 bridle is totally innovative and brings together the function of a bridle and a 5th line! We have called it W5 due to its W pattern which includes a central line to control the leading edge arc, like a 5th line. It provides perfect distortion control and the central line further helps with the depower of the kite.

ON THE WATER

▶ The FURTIVE provides a variety of sensations.

TWIN-TIP RIDING

The kite is stable and the motion is fully under control. Bar feedback is super clear which makes you want to go faster all the time. Get ready, you are going to be willing to over-take anything else on the water! Performance usually comes with jumping abilities. To improve this aspect, we have worked on the bar feeling, its maneuverability when sending the kite to the zenith and its boost during the jumps. The kite lifts you really high and glides very well afterwards. Hang-times records are up for grabs!

LONG DIST. RACING GUN / TWIN-TIP

Comfortable and fast, this kite is made for long distance courses and provides you with enough control to regulate your efforts during the long runs. Its flying range provides great tolerance to wind variations, especially in the high range. Going hard upwind feels quite exceptional as the kite gives you the feel of being on an open reach. Its traction is really oriented towards the edge of the window with good support which saves you from pushing too much on the legs or on the back. When reaching or going downwind, this kite will let you ride at full speed, helping the board to wipe away the sea state.

FOIL RIDING

To foil at high speed requires a lot of control and avoiding parasitic movements in the kite, especially wingtip flutter. If the kite moves, then you move too and so does your foil which inevitably results in losing control of your direction and balance. Controlling the distortion of the kite during all flying phases has been the hardest goal to achieve during the development for foil riding but it has clearly benefitted all other disciplines.

DIABLO V.4

PROG.

PRO RACE FOIL

A RAM AIR KITE DESIGNED FOR PRO RACERS, PERFECT FOR ALL TOP LEVEL RIDERS LOOKING FOR PERFORMANCE!

The new DIABLO V.4 has been optimized for all points of sail:

- Upwind performances enable to reach better angles thanks to the optimization work performed on the wing profile and global work on drag reduction.
- Downwind, sheeting-in feels very consistent which makes for improved efficiency.

KEY POINTS

- The kite is reactive and therefore very effective for sharp and precise tacks
- Created to reach high speeds and offer the best race angles, the kite remains stable, reassuring, and adapts to all riding styles and conditions.
- A wide range of use for incredible comfort and endless performance in both high and low range.
- Increased comfort and precision thanks to the ball bearing depower system pulley.

BARS OVERVIEW

The LINX Bar is since 2018 our new control system. Available in 3 sizes: 52/45 & 45/38 cm for the 4 lines bar and 42/35 cm for the 5 lines bar dedicated to freestyle. It allows you to choose the perfect bar for your quiver. The integrated floats house the mechanism to adjust the size of your bar.

For this 2019 edition, we have improved it and added some great features to create the best connection to your kite. The new lines are less elastic: they stretch 30% less than the previous ones, which makes kite steering more precise.

Moreover, elongation through time is reduced which allows to ride with a kite always perfectly tuned. In addition, as the lines are stiffer it makes them easier to untangle whilst setting up the kite.

WHAT'S NEW?

- New stiffer lines
- New Hub & F-ONE cleat construction for more lightness
- New V Splitter for longer lasting lines
- Harmonized color design
- 3 leash sizes available: 40, 75 & 140 cm

KEY POINTS

- Available in 3 sizes: 4 lines 52/45 cm - 45/38 cm - 5 lines 42/35 cm
- Adjustable bar length
- One line flag out system
- Manual swivel to untwist your front lines
- Only one bar for BANDIT, BREEZE, FURTIVE & TRUST
- New lines 30% less elastic: kite steering more precise and more durability

The Hub is now made of anodized aluminium and the F-ONE cleat is hollowed, which allows to have lighter parts for an even more performing bar. Finally the central neoprene float as well as the release handle have been harmonized with the rest of the bar to create a neat LINX Bar.

QUICK-RELEASE OVERVIEW

SAFETY SYSTEM

Designed to work efficiently even in the most critical situations, it can be triggered under load but also when the lines are slack. A stopper at the top holds the kitebar to make sure the system works even when the bar is pushed towards the rider and blocked in the lowest position. The push-away system enables to trigger the release with minimal force even under the highest loads (tested up to 400 kg). Since 2016, the quick-release is provided with more rigid elastics.

"SUICIDE LEASH" MODE

With its larger Life Line ring, the F-ONE push-away system offers a leash set-up enabling to release at any moment, including in "Suicide Leash" mode.

WTF?!

MANUAL SWIVEL

The quick release features a swivel which enables the user to un-twist the front lines while riding. This is done by simply rotating by hand the top part of the quick release. This rotating part is mounted on a ball bearings mechanism making the operation effortless, even if the kite is pulling.

LIFE LINE SWIVEL

It makes sure neither the lifeline nor the safety leash gets twisted. This 2nd swivel operates automatically and does not require any action from the user.

WIDE CHICKEN LOOP

The Freestyle push-away quick-release comes with a wide chicken loop to make hooking in and out easy.

ACCESSORIES OVERVIEW

SAFETY LEASH

REF: 77902-8003

F-ONE leash become this year F-ONE leashes in order to satisfy all rider's needs.

A short 40 cm leash which will make all foilers and freeriders happy as the leash will no longer drag in the water. It is the leash for all those who don't unhook

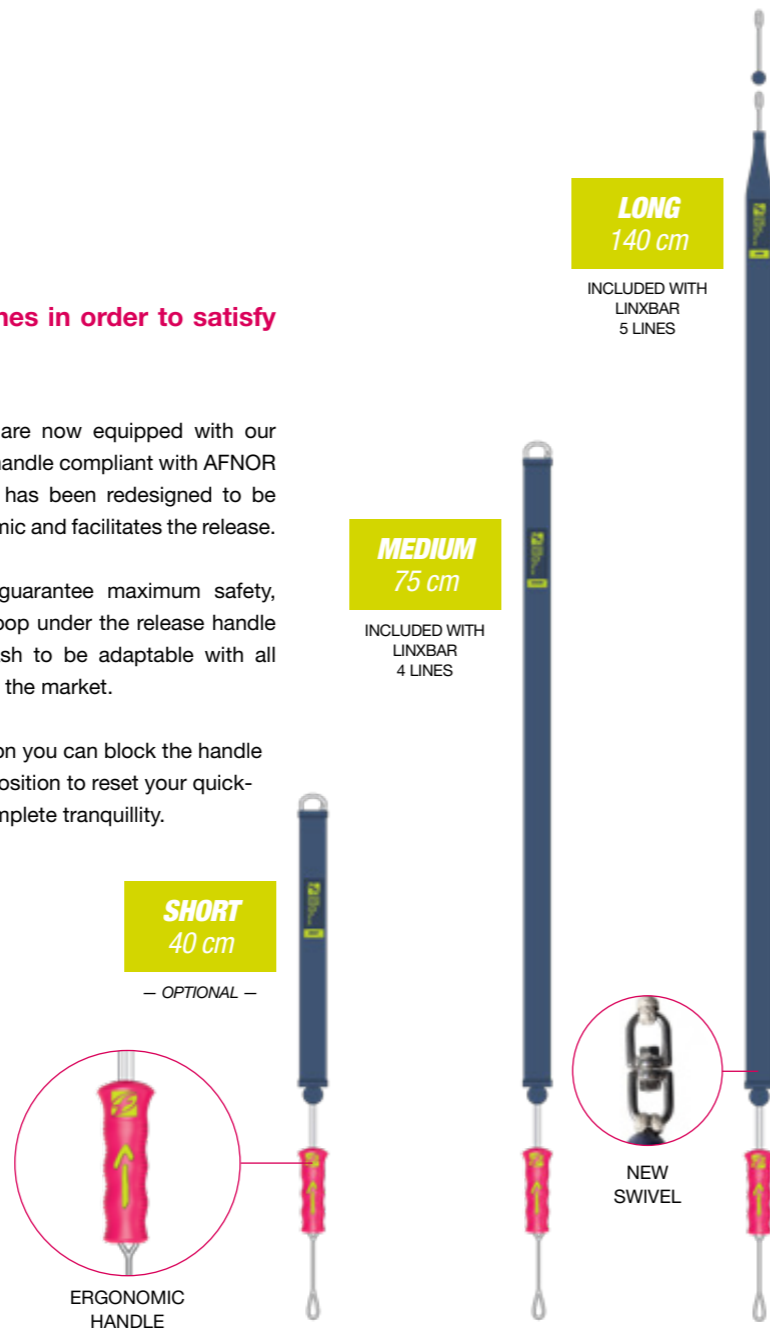

Our leashes are now equipped with our new release handle compliant with AFNOR standards. It has been redesigned to be more ergonomic and facilitates the release.

A middle-sized 75 cm leash. It becomes our standard and will be sold with all our LINXBAR 4 lines. It's a versatile leash which will suit almost every rider.

In order to guarantee maximum safety, the spectra loop under the release handle allow the leash to be adaptable with all harnesses on the market.

A long 140 cm "pure freestyle" leash, thought and designed for all New School riders. The stainless steel hook has been replaced by a pig tail which brings lightness and moreover solidity. This also avoids hand injuries during handlepasses. A swivel has been added to the leash's base to avoid twists during tricks. The LONG Safety Leash is included with all of our LINXBAR 5 lines.

Last innovation you can block the handle in an upper position to reset your quick-release in complete tranquillity.

OUR SAFETY RECOMMENDATION IS TO SECURE THE LEASH IN FRONT OF THE HARNESS

THE TRAX HRD GETS A YOUNGER SIBLING IN THE FORM OF THE TRAX ESL.

Based on the long TRAX heritage & implementing some of the latest thinking developed on the WTF?!, we have created a board which is all about having fun on the water. Early planing, super smooth riding with good edging and easy pop are the ingredients to make this board a freeride / freestyle best-seller.

SHAPE & CONSTRUCTION

- Moderate rocker for early planing, superior glide and good upwind
- Double concave with a distinct three-stage rocker line to make the ride ultra smooth, control your speed and soften the landings
- Thin rails and tip channels for more grip when edging
- 2x sizes available: 134 x 40 / 135 x 42 cm
- 2x extra sizes specifically developed for women available in March 2019 (different shape for a lighter and more manageable board)

MITU PRO

FOR THIS 2019 EDITION, WE HAVE PARTICULARLY PUSHED THE MANEUVERABILITY, MAKING IT EASIER TO CLOSE THE TURNS FOR MORE FLUIDITY.

This will be really remarkable in the waves where the MITU has gained in potential, and will also be useful when throwing freestyle tricks or simply when jibing. The DNA of the MITU remains untouched with easy planing, fast acceleration and perfect directional control.

SHAPE & CONSTRUCTION

- Rocker slightly raised on the 1st half of the board
- The deep single concave fades more progressively towards the back, particularly around the kick area which was also re-worked.
- General volume is re-centered slightly backward.
- New smaller size for youngsters & women: 5'2" x 17.7"
- 3 levels of construction: Pro Carbon / Pro Flex / ESL
- ESL standard now has deck inserts for foot straps

SURFBOARDS ACCESSORIES

F-ONE FLOW FINS (sold separately)

The F-ONE surf fins have been developed to optimize the efficiency of our shapes. Their outline, stiffness and profile were designed specifically for surfing with a kite, which means different requirements than for prone surfing. The FLOW series was developed for versatility and high performances over a wide range of conditions. From freestyle to wave riding, the boards are simply transformed. Made of epoxy composites and built using RTM TECHNOLOGY, their lightweight is especially interesting for all freestyle tricks. Their XS size provides more freedom to the board under the traction of the kite and this brings better maneuverability and control.
